

artwork guidelines

We accept many different types of file formats to bring your custom commercial label to life! If you would like us to use your exact artwork, please follow the guidelines below.

We prefer native files created in:

- Adobe Illustrator
- Adobe InDesign
- Adobe Photoshop (.psd) layered files
- Freehand

For B&W and multicolor jobs, we prefer you provide:

- Vector or BITMAP based file with a resolution between 600 and 1200 dots per inch (dpi) at 100% of final project size
 - EPS and PDF format are also supported. If an original art file or EPS file is supplied, please also provide a PDF file so we can ensure the art file is accurate.

***Convert all typeface to curves/paths/strokes
or send the original font files with your art files.***
